Project Title: Animatronics Website

I'd like to build this site with lots of graphics, a couple of different pages to explain low-level details, and a moderate amount of text. I would also like to possibly put videos and small animations to show how the more interesting/complicated portions work.

The structure of the site will be laid out like this:

Title/Intro/abstract

- Provides a small abstract/explanation/synopsis of the information included in this website
- Definition of "animatronic"
- Graphic of what a completed animatronic looks like

History

- First use of animatronics
- Throughout the years

Rapid Development

- Need more research

Emerging Technologies

- Notable useage today
- Developing technologies

How they work (Secondary, after history section is completed)

Notable examples

- Find some examples

Development

- Materials
- Construction
- Programming
- More research needed
